

Sack Holders & Clinical Bins:

Manufactured in the UK, all our sack holders and clinical bins are treated with a special anti-bacterial polyester powder coated finish which utilises active anti-bacterial technology that actively inhibits bacterial growth.

The anti-bacterial finish is effective against many strains of bacterium including e-coli and staphylococcus and helps to protect against MRSA.

Preventive coating

The anti-bacterial finish is effective against many strains of bacterium including e-coli and staphylococcus and helps to protect against MRSA.

Approved

The anti-bacterial powder coating has been tested by independent laboratories to the requirements of the internationally recognized test standards; JIS Z 2801:2000 and ASTM E 2180-01

Fire retardant

The SC and SB models have a solid body and meet the following fire retardant standards, Hospital technical memorandum No 16, Clause 133 (iii), H.T.M. No 83 and BS 476 part 7, 1971

Range

All models are available from 20 litres up to 90 litre capacity and are available in a wide range of colours

All our sack holders and clinical bins are manufactured using 0.9mm zinc coated steel to prevent corrosion and are supported by a box section frame with feet to raise it off the ground.

Sack holders are designed for heavy usage in the following environments: - NHS Hospitals & Doctors Dentists, Nursing Homes etc.
